

Georgetown University Hospital Presents

A Seminar on the Treatment of Pancreatic Cancer

Difficult to diagnose and equally difficult to treat, pancreatic cancer is often aggressive, making it the fifth leading cause of cancer death in the U.S. and the cancer with the highest fatality rate. Georgetown University Hospital's Pancreatic Disease Program is pioneering new techniques to diagnose and treat benign and malignant diseases of the pancreas and biliary system, at any stage, with greater accuracy and less discomfort to patients.

To learn more about the options available, please join us for a FREE seminar.

Saturday, November 7, 2009

Georgetown University Hospital

Gorman Auditorium

8:30 a.m. - 2:30 p.m.

Boxed lunch will be provided.

Our seminar will feature:
